Cellular and Tissue Level of Organization

Before understanding organ systems, it's essential to grasp the basic units of life: cells.

Cells

Tissues

- Groups of similar cells performing specific functions. - Four primary tissue types: 1. Epithelial tissue 2. Connective tissue 3. Muscular tissue 4. Nervous tissue

Homeostasis and Body Regulation

Homeostasis is the body's ability to maintain a stable internal environment despite external changes. Marieb's text emphasizes the importance of feedback mechanisms: - Negative feedback: Most common, maintains balance (e.g., temperature regulation). - Positive feedback: Amplifies responses (e.g., blood clotting). Understanding these mechanisms is crucial for grasping how the body responds to various stimuli and maintains health.
