2. Platform as a Service (PaaS): Offers a platform allowing customers to develop, run, and manage applications without dealing with underlying infrastructure.
3. Software as a Service (SaaS): Delivers software applications over the internet on a subscription basis.

Deployment Models

1. Public Cloud: Services offered over the public internet accessible to anyone.
2. Private Cloud: Cloud infrastructure operated solely for a single organization, offering enhanced security.
3. Hybrid Cloud: Combines public and private clouds, providing flexibility and optimized resource use.
