Sample Questions and Their Answers from the Waves WebQuest Answer Key

Below are some typical questions found in the Waves WebQuest, along with summarized answers from the answer key:

1. **What are the main differences between mechanical and electromagnetic waves?**
 1. Mechanical waves require a medium (solid, liquid, or gas) to travel through, whereas electromagnetic waves can travel through a vacuum and do not need a medium.
2. **Define wavelength and how it affects the wave's energy.**
 1. Wavelength is the distance between two consecutive crests or troughs. Shorter wavelengths generally carry higher energy, especially in electromagnetic waves.
3. **Explain how the speed of a wave is determined and what factors affect it.**
 1. The speed of a wave is calculated as $v = \lambda f$. It depends on the medium's properties; in solids, waves typically travel faster than in liquids or gases.

It is organized to align with the sections of the WebQuest, often including: - Multiple Choice Questions: Clear correct options with explanations - Short Answer Questions: Model responses that exemplify thorough understanding - Diagram-Based Questions: Correct labels and interpretations - Problem-Solving Tasks: Step-by-step solutions and formulas applied Below is a detailed breakdown of typical components covered in the answer key.

1. Types of Waves

Question Focus: Differentiating between mechanical, electromagnetic, and surface waves. Sample Question: Identify and describe the three main types of waves. Answer Key Highlights: - Mechanical Waves: Require a medium (solid, liquid, gas) to travel through; include sound waves, water waves, seismic waves. - Electromagnetic Waves: Do not need a medium; include light, radio waves, X-rays. They propagate through a vacuum. - Surface Waves: Occur at the interface between two media; such as ocean waves or seismic surface waves. Additional Notes: - Mechanical waves can be longitudinal (compression) or transverse (side-to-side). - Electromagnetic waves are transverse and consist of oscillating electric and magnetic fields.

2. Wave Properties and Their Formulas

Question Focus: Calculations involving wavelength, frequency, wave speed, and amplitude. Sample Question: Given a wave with a frequency of 50 Hz and a wavelength of 4 meters, what is its wave speed? Answer: Wave speed $(v = \text{frequency} \times \text{wavelength})$ $(v = 50 \times 4 = 200 \text{ m/s})$ Further Details: - Wavelength (λ): Distance between successive crests or troughs. - Frequency (f): Number of wave cycles per second (Hz). - Wave Speed (v): How fast the wave propagates through the medium. - Amplitude: Maximum displacement from the rest position; relates to wave energy but not directly involved in speed calculations.

3. Reflection and Refraction

Question Focus: Explaining and calculating how waves behave at boundaries. Sample Question: Describe what happens when a wave reflects off a fixed boundary versus a free boundary.
