DNS translates human-friendly domain names (like www.example.com) into IP addresses, enabling users to access websites without memorizing numerical addresses.

Hypertext Transfer Protocol (HTTP/HTTPS)

HTTP is the protocol used for transmitting web pages. HTTPS is the secure version, encrypting data to protect privacy and security.

Other Important Protocols

1. **File Transfer Protocol (FTP):** Transfers files between computers over a network.
2. **Simple Mail Transfer Protocol (SMTP):** Handles email transmission.
3. **Secure Shell (SSH):** Provides secure remote login and command execution.
