Understanding the Surface Area of Rectangular Prisms

What Is a Rectangular Prism?

A rectangular prism, also known as a rectangular cuboid, is a three-dimensional solid figure with six rectangular faces. It is characterized by its length, width, and height, which are all perpendicular to each other. Common examples include boxes, bricks, and certain buildings.

Why Is Surface Area Important?

Surface area measures the total area covered by the surfaces of a three-dimensional object. Calculating the surface area of a rectangular prism is essential in various real-world contexts, such as:

1. Determining the amount of material needed to cover an object (e.g., wrapping paper or paint)
2. Estimating packaging costs and material usage
3. Understanding physical properties and spatial relationships

Formula for Surface Area of a Rectangular Prism

The surface area (SA) of a rectangular prism is calculated by summing the areas of all six faces. The formula is:

$$SA = 2(lw + lh + wh)$$

where:

1. **l** = length
2. **w** = width
3. **h** = height

Step-by-Step Approach to Solving Surface Area Problems

Step 1: Identify the Dimensions

Begin by noting the length, width, and height of the rectangular prism from the problem statement or diagram.

Step 2: Calculate the Area of Each Pair of Opposite Faces

1. Calculate the area of the front and back faces: lw
2. Calculate the area of the top and bottom faces: lh
3. Calculate the area of the side faces: wh

Step 3: Sum the Areas and Multiply by Two

Add up the three areas, then multiply by two to account for the opposite faces:

$$\text{Total surface area} = 2(lw + lh + wh)$$

Step 4: Verify the Units and Final Answer

Ensure units are consistent and interpret the result in context. For example, if dimensions are in centimeters, the surface area will be in square centimeters.

Sample Problems for Practice

Example 1: Basic Calculation

Find the surface area of a rectangular prism with length = 8 cm, width = 5 cm, and height = 3 cm.

1. Calculate each pair of faces:

1. $lw = 8 \times 5 = 40 \text{ cm}^2$

2. $lh = 8 \times 3 = 24 \text{ cm}^2$

3. $wh = 5 \times 3 = 15 \text{ cm}^2$

2. Sum these: $40 + 24 + 15 = 79 \text{ cm}^2$

3. Multiply by 2: $2 \times 79 = 158 \text{ cm}^2$

Answer: The surface area is 158 square centimeters.

Example 2: Word Problem

A box has a length of 10 meters, a width of 4 meters, and a height of 2 meters. How much material is needed to cover the entire surface?

1. Calculate each face's area:

1. $lw = 10 \times 4 = 40 \text{ m}^2$

2. $lh = 10 \times 2 = 20 \text{ m}^2$

3. $wh = 4 \times 2 = 8 \text{ m}^2$

2. Sum: $40 + 20 + 8 = 68 \text{ m}^2$

3. Multiply by 2: $2 \times 68 = 136 \text{ m}^2$

Answer: 136 square meters of material are needed.
