What Is Endocrinology?

Endocrinology is the branch of medicine dedicated to the endocrine system, which comprises glands that produce hormones. These hormones are chemical messengers that influence growth, metabolism, reproduction, mood, and many other physiological processes.

Key glands involved in endocrinology include:

1. The pituitary gland
2. The thyroid gland

3. The parathyroid glands
4. The adrenal glands
5. The pancreas
6. The gonads (ovaries and testes)

The endocrine system works closely with the nervous system to maintain homeostasis, or internal balance, within the body.

The Role of Hadley Endocrinology

Hadley Endocrinology typically refers to the specialized practice or research focus on hormonal health within the Hadley region or a specific clinical setting named Hadley. Practitioners in this field diagnose and treat a wide array of conditions related to hormonal imbalance or dysfunction.
