Sample Ecology Webquest Answer Highlights

To give you an idea of what an ecology webquest answer key contains, here are sample responses to common questions:

Q1: What is an ecosystem?

An ecosystem is a community of living organisms interacting with each other and with their non-living environment within a specific area. It includes plants, animals, soil, water, and climate factors that are interconnected and depend on each other for survival.

Q2: Explain the flow of energy in a food chain.

Energy in a food chain starts with the sun, which provides light energy to producers (such as plants). Consumers (herbivores and carnivores) then obtain energy by eating these producers or other consumers. Decomposers break down dead organisms, returning nutrients to the environment. Energy decreases at each level due to metabolic processes, making energy transfer inefficient.

Q3: Name three human activities that threaten biodiversity.

1. Deforestation for agriculture and urban development
2. Pollution from industrial waste and chemicals
3. Introduction of invasive species that compete with native species
