Sample Review Question and Answer Analysis

Question: Calculate the total resistance when three resistors of 10Ω , 20Ω , and 30Ω are connected in series. Answer: Total resistance, $R_{\text{total}} = R_1 + R_2 + R_3 = 10\Omega + 20\Omega + 30\Omega = 60\Omega$ Analysis: This answer exemplifies straightforward application of series resistance formulas. The solution demonstrates the importance of understanding circuit configurations and reinforces the concept that resistances in series simply add. Question: In a parallel circuit with resistors of 15Ω and 30Ω , what is the equivalent resistance? Answer: Using the formula for parallel resistances: $1/R_{\text{eq}} = 1/R_1 + 1/R_2 = 1/15 + 1/30 = (2/30) + (1/30) = 3/30 = 1/10$ Therefore, $R_{\text{eq}} = 10\Omega$ Analysis: Answers like these include detailed calculation steps, which are invaluable for learners to follow the logic and methodology. Pedagogical Strengths of the Answers - Step-by-step solutions: Encourage understanding of processes rather than rote memorization. - Use of diagrams: When applicable, visual aids are incorporated to clarify complex connections. - Conceptual explanations: The answers explain why certain formulas apply, solidifying theoretical knowledge. - Practical applications: Some answers extend to real-world implications, such as safety precautions or maintenance considerations.
