Answer Key for Central Angles Worksheet

Part 1: Basic Identification

1. True
2. False (a central angle can be greater than 180° , called a reflex central angle)
3. False (an inscribed angle is different from a central angle)
4. True

Part 2: Calculating Central Angles

1. Central angle $AOB = 100^\circ$ (since measure of central angle equals intercepted arc)
2. Central angle $COD = 240^\circ$

Part 3: Finding Intercepted Arcs

1. Arc $EA = 45^\circ$ (measure of the intercepted arc equals the central angle)
2. Intercepted arc $= 120^\circ$ (since it equals the measure of the central angle)

Part 4: Complex Problems

1. No, the intercepted arcs are not necessarily congruent because the angles are different. The first arc corresponds to 70° , the second to 110° , so the arcs measure 70° and 110° , respectively, which are not equal.
2. The total intercepted arc is 85° , with one part being 50° , so the other part is $85^\circ - 50^\circ = 35^\circ$.

Part 5: Word Problems and Applications

1. The Ferris wheel rotates 90° from one stop to the next, which is $1/4$ of 360° .
2. The sector with a 60° central angle represents $60/360 = 1/6$ of the entire circle.
