What Are Commodities?

They are broadly categorized into: - Agricultural Products: Wheat, corn, coffee, cotton, sugar, soybeans. - Precious Metals: Gold, silver, platinum, palladium. - Energy Resources: Crude oil, natural gas, coal. - Industrial Metals: Copper, aluminum, zinc, nickel. These commodities are traded on various exchanges, primarily through futures contracts, which specify the delivery of a specified quantity at a predetermined price and date.

The Structure of the Commodity Market

The commodity market operates through multiple channels: - Spot Market: Immediate purchase and sale of commodities at current market prices. - Futures Market: Agreements to buy or sell a commodity at a future date, allowing traders to hedge risk or speculate on price movements. - Options Market: Contracts granting the right, but not the obligation, to buy or sell at a specified price before expiration. - Over-the-Counter (OTC) Market: Customized contracts negotiated directly between parties, often for hedging.

Currency Fluctuations

Commodities are typically priced in USD. A weaker dollar tends to push commodity prices higher, and vice versa.
