Introduction to Darwin Natural Selection Worksheets

Natural selection, as proposed by Charles Darwin in the 19th century, describes the mechanism by which species adapt and evolve over time. It hinges on the idea that individuals within a species vary in traits, some of which confer advantages in survival and reproduction. Over generations, these advantageous traits become more prevalent, leading to evolutionary change. Darwin natural selection worksheets are educational materials designed to simplify and elucidate this complex process. They typically include a combination of explanatory texts, diagrams, exercises, and assessment questions aimed at reinforcing students' understanding of key concepts such as variation, competition, adaptation, and survival of the fittest.
